On Twin Element we are looking for the worksheet for the new meter to look like this. 2 Reads/Rates on the Primary Element with Register IDs showing as 1 and 2.

On answering yes against working on a Twin Element meter, we'd expect to see 1 Read / Rate with the Register ID being 3.

On Twin Element we are looking to ensure the engineer selects "yes" against removing on a secondary meter.

Populating 1 against the Read / Rates with a Reg ID of 3 and the correct read against this register.
